

INDUSTRY-LED BMSB SURVEILLANCE

COULD YOU BE OUR NEXT BMSB CHAMPION?

Are you able to have two BMSB traps installed for 12 weeks at your post-harvest facility? Can you commit to checking these fortnightly?

It's easy and we'll give you all the training needed.

If this sounds like something you, or your post-harvest organisation would be interested in, **sign up using the QR code on the right.**

WHAT'S INVOLVED?

It's simple and easy - you'll have two traps placed at your site for 12 weeks from January through April.

You check traps fortnightly - that's six trap checks in total and each should take 30 minutes maximum.

All stink bugs detected will need to be captured, photographed and reported through to the Find-A-Pest app for ID.

KVH provides training, including a one-on-one session at your site prior to the season starting. We also give you all the trap components, help with set up, and a monitoring kit with all the resources you need.

IT WOULD BE STINK IF THESE GOT INTO NEW ZEALAND

Lures and sticky traps attached to a tree

Checking surrounding foliage using a beating stick and sheet to catch falling bugs

Checking the beat sheet for any target pests that need to be collected and reported
